THD DIAGNOSTIC AND SURGICAL LINE

Innovation and practicality for the coloproctologist

The THD diagnostic and surgical line is a complete range of THD disposable devices for diagnosing and treating anorectal diseases. THD devices are ideal for the diagnosis and treatment of numerous proctological diseases, such as haemorrhoids, polyps, condylomas, fistulas, neoplastic lesions, fissures and other lesions of the anorectal region. The continuous technological research and the work by a specialized pool of doctors, researchers and designers make THD devices the most innovative and versatile answer to the needs of specialists, guaranteeing the highest standards of safety, handling and precision of use.

BENEFITS

PRACTICAL

The self-illuminating devices do not need to be connected to a light source, allowing it to be used in any environment.

SAFE

The self-illuminating products are disposable, preventing any possibility of cross-contamination.

COST-EFFECTIVE

The reduced preparation time between one patient and the next allows more visits to be performed during a clinical session.

SELF ILLUMINATING ANOSCOPES

THD® Light-Scope ANO LED

THD® N-Ano

THD® N-Ano Maxi

The THD self illuminating anoscopes are single-use devices for inspecting the anal canal that are made of medical grade polycarbonate with a powerful built-in LED light.

The LED is activated by simply pulling out a tab, giving a clear and detailed view of the inspection area.

THD® Light-Scope ANO LED

With its truncated and bevelled variants, the THD® Light-Scope ANO LED anoscope provides the highest lighting quality of the THD range of anoscopes thanks to an opaque terminal.

STERILITY	TIP	LENGTH	OUTSIDE DIAM.	REF
STERILE	BEVELLED	70 mm	25 mm	800113
STERILE	TRUNCATED	70 mm	25 mm	800112
NON STERILE	BEVELLED	70 mm	25 mm	800093
NON STERILE	TRUNCATED	70 mm	25 mm	800092

SELF ILLUMINATING ANOSCOPES

THD® N-ANO

The truncated and bevelled terminal variants of the **THD® N-Ano** anoscope with LED light offer the best quality/price ratio of the THD range.

STERILITY	TIP	LENGTH	OUTSIDE DIAM.	REF
NON STERILE	BEVELLED	91 mm	21.7 mm	800134
NON STERILE	TRUNCATED	91 mm	21.7 mm	800040

THD® N-ANO Maxi

The truncated and bevelled terminal variants of the **THD® N-Ano Maxi** anoscope with LED light offer the best quality/price ratio of the THD range.

The **THD® N-Ano Maxi** has a larger diameter than the THD® N-Ano version.

STERILITY	TIP	LENGTH	OUTSIDE DIAM.	REF
NON STERILE	BEVELLED	91 mm	25.8 mm	800166
NON STERILE	TRUNCATED	91 mm	25.8 mm	800165

TRADITIONAL ANOSCOPES

THD® Anoscope Pediatric THD® Anoscope Medio THD® Anoscope Maxi

The line of traditional anoscopes are available in different lengths and diameters, and can be easily distinguished by the practical colour coding of the handles. They are available in both bevelled and truncated versions.

This high quality material is used to obtain a highly transparent, unbreakable, smooth product with a tapered and ergonomic shape that makes it lightweight and atraumatic.

The THD® Revolution optical fibre connection provides excellent lighting and visibility.

THD® Anoscope Pediatric

The THD® Anoscope Pediatric with its truncated and bevelled end variants is the ideal solution for patients with a very narrow anal canal.

STERILITY	TIP	LENGTH	OUTSIDE DIAM.	REF
STERILE	BEVELLED	65 mm	15 mm	800012
STERILE	TRUNCATED	65 mm	15 mm	800011
NON STERILE	BEVELLED	65 mm	15 mm	800021
NON STERILE	TRUNCATED	65 mm	15 mm	800020

TRADITIONAL ANOSCOPES

THD® Anoscope Medio

The THD® Anoscope Medio, with its truncated and bevelled end variants, ensures absolute safety and function for the surgeon.

STERILITY	TIP	LENGTH	OUTSIDE DIAM.	REF
STERILE	BEVELLED	90 mm	22 mm	800015
STERILE	TRUNCATED	90 mm	22 mm	800014
NON STERILE	BEVELLED	90 mm	22 mm	800024
NON STERILE	TRUNCATED	90 mm	22 mm	800023

THD® Anoscope Maxi

The THD® Anoscope Maxi, with its truncated and bevelled end variants, ensures absolute safety and function for the surgeon.

The THD® Anoscope Maxi has a larger diameter than the THD® Anoscope Medio version.

STERILITY	TIP	LENGTH	OUTSIDE DIAM.	REF
STERILE	BEVELLED	90 mm	26 mm	800018
STERILE	TRUNCATED	90 mm	26 mm	800017
NON STERILE	BEVELLED	90 mm	26 mm	800027
NON STERILE	TRUNCATED	90 mm	26 mm	800026

SELF ILLUMINATING RECTOSCOPES

THD® Light-Scope Recto LED MINI & MAXI

The THD self illuminating rectoscopes are single-use devices for inspecting the anorectal canal and the distal region of the sigmoid colon.

They are made of medical-grade polycarbonate and have a powerful built-in LED light.

The LED is activated by simply pulling out a tab, giving a clear and detailed view of the inspection area.

A magnifying glass magnifies the user's view of the inspected area by 4 times (4x).

THE THD SOLUTION

The sterile versions of the THD Light-scope Recto LED rectoscopes are an effective solution for performing the "anastomosis air leak test" after an anorectal anastomosis.

The anastomosis air leak test needs to be performed at the end of resection surgery: this allows the surgeon to understand if the anastomosis is sealed or if another resection procedure is required.

The sterile version of the **THD® Light-Scope Recto LED** is recommended for use in the operating room, as it is pre-assembled and ready to perform this type of test.

SELF ILLUMINATING RECTOSCOPES

THD® Light-Scope Recto Mini LED

The THD® Light-Scope Recto Mini LED does not require preparation before use.

A 4x magnifying glass and an insufflation bulb are included in the sales pack.

STERILITY	INSUFFLATION BULB	LENGTH	OUTSIDE DIAM.	REF
STERILE	YES	200 mm	23 mm	800119
STERILE	NO	200 mm	23 mm	800117
NON STERILE	YES	200 mm	23 mm	800100
NON STERILE	NO	200 mm	23 mm	800098

THD® Light-Scope Recto Maxi LED

The THD® Light-Scope Recto Maxi LED does not require preparation before use.

A 4x magnifying glass and an insufflation bulb are included in the sales pack.

The THD® Lightscope Recto Maxi LED is longer than the Mini version.

STERILITY	INSUFFLATION BULB	LENGTH	OUTSIDE DIAM.	REF
STERILE	YES	250 mm	23 mm	800118
STERILE	NO	250 mm	23 mm	800116
NON STERILE	YES	250 mm	23 mm	800099
NON STERILE	NO	250 mm	23 mm	800097

THD® Surgy

To aid the surgeon and to ensure absolute patient safety, it is essential that the instruments used during transanal procedures are precise, manageable and practical.

The THD surgical line offers THD® Surgy, the exclusive surgical retractor made of medical grade polycarbonate that is available in both Mini and Maxi versions.

THD® Surgy has a powerful built-in LED light that provides a clear and detailed view of the area being inspected and is activated by removing a practical tab.

THE THD SOLUTION

Anorectal surgical procedures have often been **performed with inadequate lighting** and surgeons have passively accepted this limitation as an inevitable fact.

THD® Surgy provides intense light where it is needed, without annoying shadows or bright reflections from the metal retractor.

The ergonomics of using THD® Surgy are improved by the fact that there are no optical fibre cables and that external light sources are not needed.

The material used prevents any burns caused by accidental contact between the electrosurgical unit and a metal retractor.

This single-use system eliminates the risk of cross-contamination and the need for re-sterilization, which reduces the number of feasible procedures that can be performed.

THD® Surgy Mini LED

The compact and asymmetrical design of the THD® Surgy Mini LED allows easy access to the anal canal without sphincter trauma, ensuring good dilation and an excellent view of the operating field. The THD® Surgy Mini LED is recommended for patients with a narrow anal canal.

STERILITY	LENGTH	OPERATING WINDOW	REF
STERILE	122 mm	23x85 mm	800124
NON STERILE	122 mm	23x85 mm	800108

THD® Surgy Maxi LED

The compact and asymmetrical design of the THD® Surgy Maxi LED allows easy access to the anal canal without sphincter trauma, ensuring good dilation and an excellent view of the operating field. The THD® Surgy Maxi LED has a larger operating window allowing easier access.

STERILITY	LENGTH	OPERATING WINDOW	REF
STERILE	122 mm	28x85 mm	800125

THD® LIGHT-SCOPE PROCTO HRA

THD® Light-Scope Procto HRA

The THD® Light-Scope Procto HRA is a single-use device used for high resolution proctoscopy exams where inspection of the anal canal and margin are not viewed directly, but by magnification through a high resolution acquisition system.

The camera connection adapter allows easy connecting/disconnecting and is equipped with a guard to prevent contamination from the image acquisition device.

THE THD SOLUTION

Early diagnosis and prevention play a fundamental role in managing the treatment of anal cancer and the lesions that precede it, known as anal dysplasia.

The progression from anal dysplasia to anal cancer is slow: this long period allows pre-cancerous lesions to be diagnosed and treated.

The THD® Light-Scope Procto HRA proctoscope defines a new treatment standard by allowing diagnostic biopsies and treatments to be performed under magnification.

THD® LIGHT-SCOPE PROCTO HRA

The large lateral openings allow the surgeon to insert biopsy forceps, gauze, pads and ablation tips inside the proctoscope without the need to remove the camera and disrupting the magnified view.

THD® Light-Scope Procto HRA

The proctoscope is equipped with a built-in LED light source: the surface finish and the white coloured terminal cone diffuse the light providing optimal visibility.

STERILITY	TIP	LENGTH	OUTSIDE DIAM.	REF
NON STERILE	TRUNCATED	112 mm	25 mm	800191

THD® BANDY

THD® Bandy

THD® Bandy is a single-use medical device for the treatment of low grade haemorrhoids.

THD Bandy is a suction rubber band ligator ready for immediate use that does not need to be cleaned and sterilised.

THD® Bandy includes the ligator, 4 rubber bands and loading system with advancement cone. The surgeon positions the rubber band with one hand without the need of any assistance.

THE THD SOLUTION

THD® Bandy does not have the typical disadvantages of traditional systems.

The Bandy THD® ligator is made of a transparent plastic material, allowing the amount of aspirated tissue to be viewed directly. The single-use system eliminates the risk of cross-contamination and the need for re-sterilisation, which reduces the time between one patient and the next.

The suction from the THD® Bandy ligator eliminates the need for forceps; the surgeon then has a free hand to maneuver the anoscope for easier insertion of the ligator. The THD® N-Ano Mini & Maxi single-use anosscopes, equipped with a built-in LED light and ergonomic shape, together with THD® Bandy are the perfect combination for an optimal ligation.

THD® BANDY

THD® Bandy

The THD® Bandy is connected to a suction system, which is used to control the amount of aspirated tissue.

The rubber band is quickly and safely released by means of a convenient trigger.

STERILITY	DEVICE LENGTH	REF
NON STERILE	150 mm	800079

THE BASIC STEPS

1

Insertion of the Positioning Cone onto the end of THD® Bandy

2

Loading of the rubber band using just one hand

3

Connection to the suction source

4

Suction

5

Visual check of the amount of tissue in the ligator

6

Releasing the rubber band at the base
